Professional Summary

Azure Cloud Engineer with 8 years of IT experience, including 4.8 years of expertise in Azure DevOps and cloud-native technologies. Skilled in designing, deploying, and managing secure, scalable, and high-performance cloud infrastructures for enterprise-grade applications. Proven track record in driving automation through Infrastructure as Code (IaC) and developing robust CI/CD pipelines to accelerate delivery and enhance system reliability. Adept at optimizing cloud environments for cost efficiency, performance, and security, while ensuring compliance and operational excellence. Strong ability to align cloud strategies with business objectives, delivering resilient, future-ready solutions that create measurable business impact.

Core Skills

Azure DevOps | Docker | Azure Cloud Computing | Terraform | Azure Virtual Machines (VMs) | Azure CLI | Azure Key Vault | Git & GitHub | Azure Repos | CI/CD Pipeline

Experience

Pearce Services Global Private Limited – Gurugram

October 2025 – Present– Pearce Services Global Private Limited

- Automated end-to-end cloud infrastructure provisioning using Terraform (Infrastructure as Code) to ensure consistent, scalable, and repeatable deployments across Development, QA, and Production environments.
- Designed and implemented CI/CD pipelines using Azure DevOps and Azure Pipelines, reducing manual intervention and enabling faster, reliable application deployments.
- Built and deployed containerized applications using Docker, improving application portability, scalability, and environment consistency.
- Implemented infrastructure automation and configuration management, eliminating configuration drift and standardizing deployment workflows.
- Improved system reliability and performance by applying DevOps best practices including auto-scaling, load balancing, and infrastructure optimization.
- Streamlined release processes by replacing manual deployment workflows with fully automated CI/CD pipelines, enabling faster and error-free software delivery.
- Collaborated with development and operations teams using GitHub for version control, ensuring efficient code management and continuous integration.

Talent Pull & Infrastructure Pvt Ltd: - June 2025 to October 2025

- Automated cloud infrastructure provisioning using Terraform (IaC) to deliver consistent, secure, and version-controlled deployments across development, QA, and production environments.
- Containerized and deployed applications using Docker, improving application portability, scalability, and deployment consistency across multiple environments.
- Configured Prometheus and Grafana for monitoring and alerting, enhancing system observability and reducing incident response time by 40%.
- Developed and optimized CI/CD pipelines to automate build, test, and deployment processes, reducing manual effort and accelerating software releases.
- Improved infrastructure scalability, reliability, and operational efficiency by implementing DevOps best practices and automation across deployment workflows.

Reliance Industries Ltd., Raipur, Chhattisgarh: — DevOps Engineer | April 2021 –29th March 2025

- Automated end-to-end cloud infrastructure provisioning using Terraform (IaC), ensuring highly consistent, reliable, and repeatable deployments across Dev, QA, and Production environments.
- Built and deployed containerized applications using Docker, enabling scalable, portable, and fault-tolerant solutions across diverse environments.
- Streamlined deployment processes by eliminating manual tasks and configuration drift through standardized, automated pipelines.

- Improved infrastructure resilience and scalability by applying DevOps best practices to optimize performance, reduce downtime, and enhance operational workflows.
- Enhanced deployment efficiency by replacing manual workflows with fully automated CI/CD processes, reducing configuration drift and ensuring rapid, errorfree releases.

Pratap Technocrat Pvt Ltd- Network Support Engineer | June 2018 - May 2019

- Set up customized internet solutions for both residential and commercial clients, ensuring high-speed and reliable network connectivity tailored to specific requirements.
- Offered end-to-end technical support, efficiently diagnosing and resolving connectivity issues, network outages, and performance slowdowns to minimize disruptions.
- Addressed network inefficiencies by optimizing configurations and implementing upgrades to meet changing customer demands and maintain peak performance.

Projects

- Terraform Module Library – Developed reusable Terraform modules for Azure resources to enable scalable infrastructure deployment.
- Dockerized Microservices Platform – Built and containerized microservices using Docker and deployed them on Kubernetes with CI/CD integration.
- CI/CD Pipeline Automation – Designed multi-stage pipelines using Azure DevOps and GitHub Actions for automated testing and deployment.
- Monitoring System – Implemented Prometheus and Grafana dashboards with alerting for infrastructure and application metrics.

Certifications

Oracle Cloud Infrastructure 2025 Foundations Associate
Microsoft Certified:(AZ-900) Azure Fundamentals

Education

Bachelor of Engineering in Electronics & Communication
LNCT Indore, RGPV Bhopal - Year of Completion: 2016
